**Key Ingredients**

**Lactic Acid:**
An alpha hydroxy acid that diminishes the cohesion of the surface skin cells and subsequently prevents the thickening of the stratum corneum. Lactic acid is absorbed across the stratum corneum and assists in cell detachment from that level. The resulting smoothness and flexibility of the skin’s surface is evident soon after application.

**Pumpkin Enzyme Extract:**
A powerful antioxidant high in vitamin A and beta carotene that gently exfoliates to remove dead skin cells and decongests pores while enabling vitamins and nutrients to be absorbed. Pumpkin Enzyme is a natural skin and follicle decongesting agent.

**Pomegranate Enzyme Extract:**
Pomegranate is claimed as one of the oldest known medicines to man. New science has also identified many of its benefits in skin care that include assisting in cell regeneration and proliferation, antioxidant components responsible for brightening skin, extending the life of fibroblast cells and expedites wound healing.

**Intense Antioxidant Professional Exfoliator**

**Product Line:** Professional Only  
**Size:** 4.0 fl. oz. US | 118 mL  
**Item Number:** GM95  
**Protocol:** 02 Treat
INGREDIENTS: Water (Aqua), Lactic Acid, Palmitoyl Tripeptide-5, Glycerin, 1-Methylhydantoin-2-Imide, Lactobacillus Punica Granatum Fruit Ferment Extract, Leuconostoc/Radish Root Ferment Filtrate, Lactobacillus/Pumpkin Ferment Extract, Papain, Galactoarabinan, Cyclopentasiloxane, Dimethiconol, Phospholipids, Glycine Soja (Soybean) Oil, Glycolipids, Glycine Soja (Soybean) Sterols, Retinol, Carbomer, Allantoin, Fragrance, Sodium Hydroxide, Hydroxyethylcellulose, Methylchloroisothiazolinone, Methylisothiazolinone, FD & C Yellow #6, Red 33

Frequently Asked Questions

I have heard this product referred to as the “walk in welcome” peel. Why is that?

Due to the nature of chemical peels, GlyMed Plus procedures require that clients are on approximately 4 weeks of home care before their first clinical treatment. This helps the esthetician evaluate and determine any potential sensitivities that can be avoided. However, we also understand how clients can be anxious to begin their clinical treatments. GlyMed Plus Intense Antioxidant Professional Exfoliator is safe enough to introduce to clients on the first visit prior to their recommended home care providing that the Skin Care Questionnaire is obtained and evaluated and caution is taken regarding the length of initial treatment.

I read that Intense Anti-Oxidant Professional Exfoliator is recommended for mature aging skin. Can my acne clients benefit?

Yes! Anti-Oxidant Professional Exfoliator contains the powerful enzyme action of pumpkin and papaya. For more precise extractions, apply this treatment for three to five minutes before extractions to break down the corneocyte cohesion that makes extractions more difficult.

I have had many clients notice an immediate brightening to their skin after this procedure. Can you help me explain why this occurs?

There are several ingredients in the Intense Antioxidant Professional Exfoliator that contribute to its success. First, the combined enzymatic activity of pumpkin and papaya gently lift away dead, superficial skin cells that create a dull skin tone. In addition, it contains the lightening properties of lactic acid, pomegranate enzyme, and methylhydantoin-2-amide to give the skin that instant “glow.”
